HYACINTHS --- *The Gorgeous Bloom*

Very Satisfactory and Pleasing Indoors in Pots or Glasses as well as Outdoors

BEDDING HYACINTHS

FIRST SIZE HYACINTHS

For those who desire to produce Hyacinths of the grandest and largest size and finest quality, we recommend Navlet's FIRST SIZE Hyacinth Bulbs. They are extra choice, large round bulbs, selected especially for the most critical trade. They will produce the extra large, handsome flowers so highly prized, and are excellent for forcing and pot culture.

All varieties, 15c each; \$1.50 per doz. postpaid;
\$11.00 per 100.

GRAND MAITRE—Dark porcelain blue, large truss.

GEN'L DE WET—Bright pink, large erect spike.

GERTRUDE—Fine rosy pink; excellent sort for forcing or bedding; large flowers.

LA VICTOIRE (New)—Brilliant carmine red, forces early, extra fine.

L'INNOCENCE—One of the earliest; pure white, large truss.

QUEEN OF THE BLUES—Azure blue, large bells.

YELLOW HAMMER—Golden yellow, broad spikes.

MIXTURE of all above named varieties, per doz., \$1.50; per 100 \$10.00, delivered free.

OUTDOOR CULTURE

The preferable season is September, October, November and December, but bulbs give good results if planted later. Hyacinths should be planted from two to eight inches apart. After planted from two to three inches below the surface and five to eight inches apart. After flowering, if the beds are wanted for late Spring planting, take up the bulbs, top and roots, and "heel in" in some corner of the garden until the bulbs mature, after which they should be spread out in an airy room to dry, and kept in a cool dark place until time for replanting the following autumn.

INDOOR CULTURE

Bulbs for winter blooming can be planted from September until December—the earlier the better. Plant one bulb to a four-inch pot, or three to a six-inch pot. Then place in a cool, dark cellar, watering well. The whole success of pot culture depends on getting the roots well established in the pots, at a low temperature, before you begin to force the tops. From three to four weeks is not too long to leave them in a dark place. After this the bloom is easily developed by giving light, heat and water, and one can have a supply of flowers from Christmas until Easter by regulating the time of bringing them to the light.

GLASS CULTURE

When it is desired to grow Hyacinths or Narcissus in water they should be placed so that the base of the bulb merely touches the water. The glass should then be set in a cool dark place until filled with roots, when they should be brought into the light. Every few days fill the glass with water. Give as much fresh air as possible in a temperature of about 60 degrees until the spikes are developed.

BEDDING HYACINTHS (Second Size)

This is the grade usually purchased for mass bedding, except where particularly grand individual blooms are desired. Because of the demand for this price and size of bulb, we have a particularly select strain of strong, vigorous bulbs, producing fine flowers.

CHEWING FESCUE (*Festuca rubra* var, *fallax*)—

RED TOP (*Agrostis Alba*)—

SHADY LAWN GRASS—

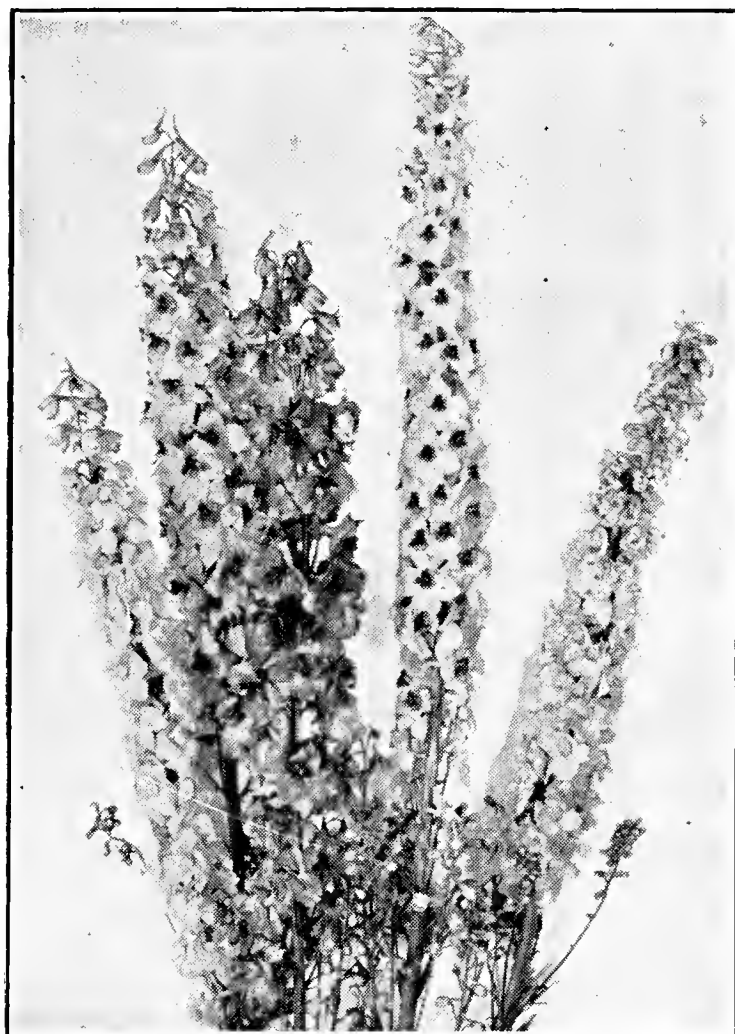

This is a special blend of shade-loving grasses for lawns facing the North without much sunshine and shady spots under trees and places where there is little direct sunlight. It will quickly produce an abundant and even growth of deep beautiful green grass. 1 lb 75c; 10 lb \$6.50, postpaid.

LAWN MIXTURE—

There are many advantages in well blended mixtures. The principal reason for such blends is the fact that each grass lives, to a great extent, on different constituents. The season that would completely check the growth of one variety of grass will act as an encouragement to some other variety, so that the complete failure of a mixture is practically impossible.
